

Voltage Protocols for eNPR devices

Revision History

Date	Version	Description
06/04/2021	1.0	First version of document

Introduction

This document illustrates the parametric voltage protocols available for eNPR devices.

Part 1 of this document describes the protocols available for eNPR devices starting with firmware version 6. For older firmware versions, please refer to Part 2.

In order to check the firmware version connect your device to EDR, click the “?” menu and select “Device Information”. If your device uses the older protocols version and you want to update it, please send an email to support@elements-ic.com attaching a screenshot of the Device Information window.

Preliminary Note

In the following variable Vr- equals:

- -700mV for Ultra Low Noise modality
- -2000mV for Low Noise modality

while, Vr+ equals:

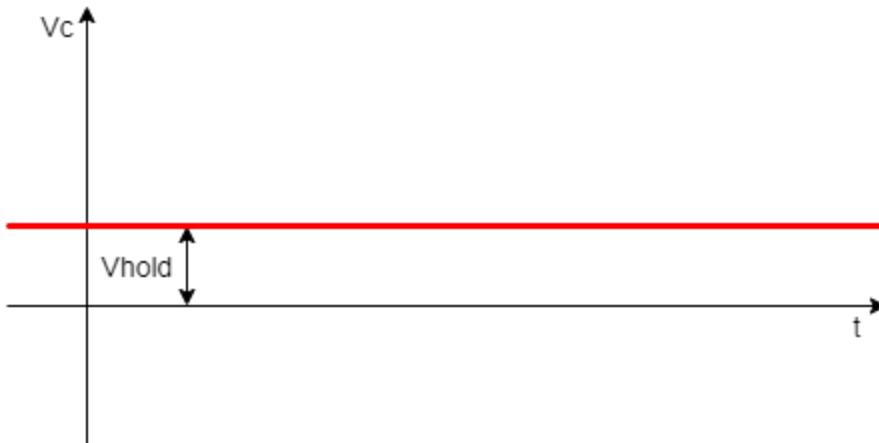

- +700mV for Ultra Low Noise modality
- +2000mV for Low Noise modality

Part 1: Voltage protocols list for eNPR v6 and higher

0) Holding voltage

Protocol applied by default when nothing else is applied. Applies a constant voltage.

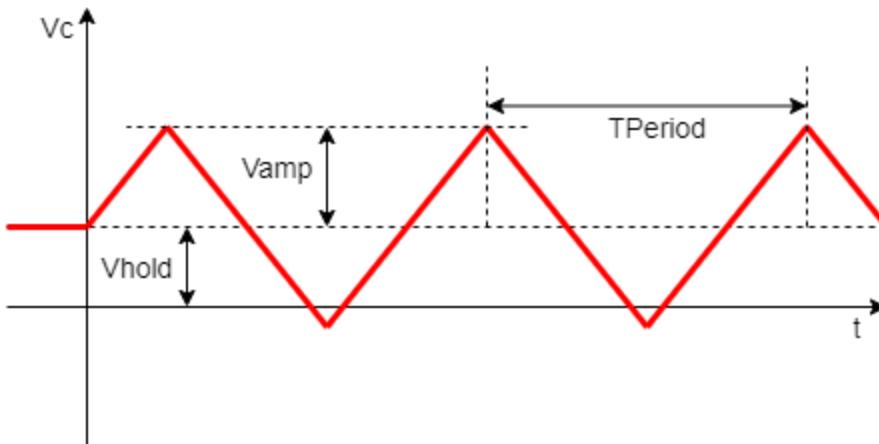

Parameters

V_{hold} : holding voltage, range [V_r^- , V_r^+], resolution 1mV

1) Triangular wave

Repeats a triangular wave indefinitely.

Parameters

V_{hold} : holding voltage, range $[V_r^-, V_r^+]$, resolution 1mV

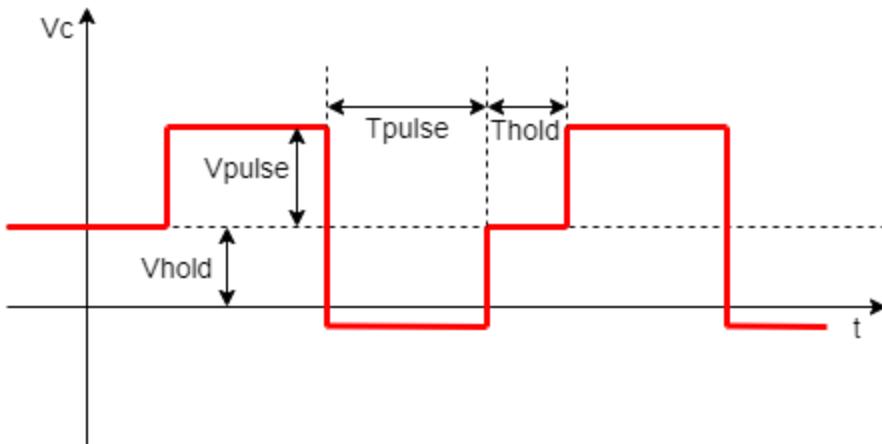

V_{amp} : voltage amplitude wrt V_{hold} , available values {25, 50, 75, 100}mV

T_{Period} : repetition period, range [1, 1000]ms, resolution 1ms

2) Seal test

Repeats pairs of positive and negative rectangular pulses indefinitely.

Parameters

V_{hold} : holding voltage, range [Vr-, Vr+], resolution 1mV

V_{pulse} : voltage amplitude wrt V_{hold} , range [Vr-, Vr+], resolution 1mV

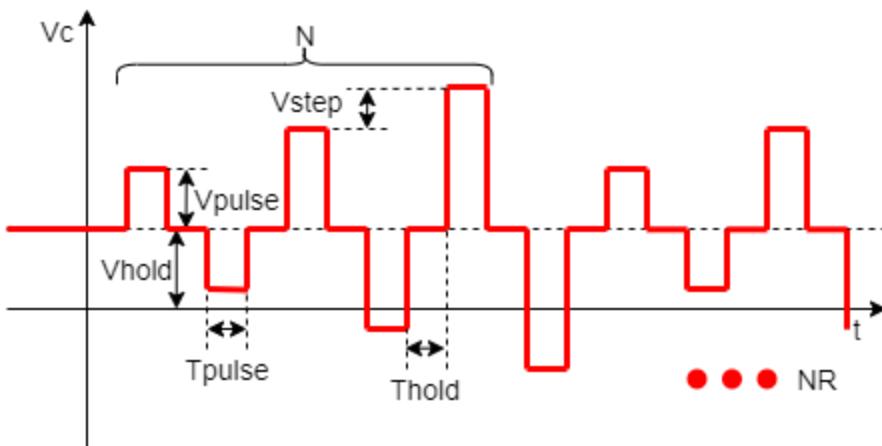

T_{hold} : time between consecutive pairs of pulses during which V_{hold} is applied, range [0, 2000000]ms, resolution 1ms

T_{pulse} : pulses duration, range [1, 2000000]ms, resolution 1ms

3) Conductance estimation

Repeats a series of pairs of positive and negative rectangular pulses of changing amplitude. The series can be repeated for a given number of times or indefinitely.

Parameters

Vhold: holding voltage, range [Vr-, Vr+], resolution 1mV

Vpulse: voltage amplitude of the first pair of pulses in the series wrt Vhold, range [Vr-, Vr+], resolution 1mV

Vstep: increase (decrease if negative) of the amplitude of any following pair of pulses, range values [Vr-, Vr+], resolution 1mV

Thold: time between consecutive pulses during which Vhold is applied, range [0, 2000000]ms, resolution 1ms

Tpulse: pulses duration, range [1, 2000000]ms, resolution 1ms

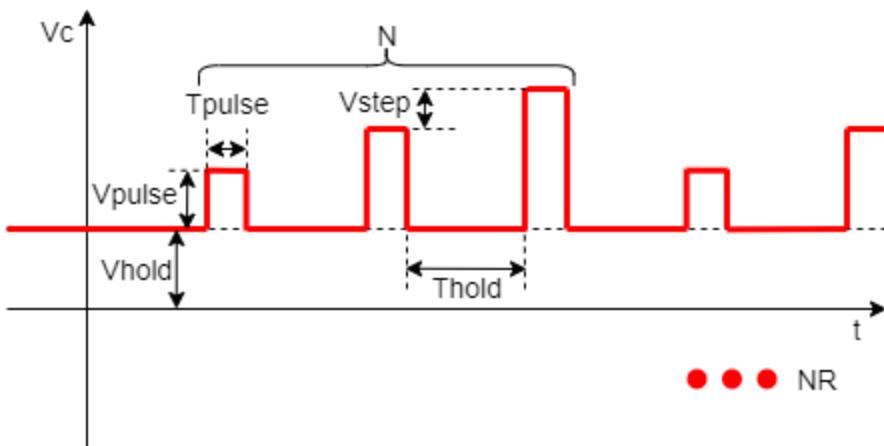

N: number of pairs of pulses in each series, range [1, 1000]

NR: number of repetitions of the whole series, range [0, 1000]. NOTE: set to 0 for infinite repetitions

4) Rectangular pulses with variable amplitude

Repeats a series of rectangular pulses of changing amplitude. The series can be repeated for a given number of times or indefinitely.

Parameters

V_{hold} : holding voltage, range [Vr-, Vr+], resolution 1mV

V_{pulse} : voltage amplitude of the first pulse in the series wrt V_{hold} , range [Vr-, Vr+], resolution 1mV

V_{step} : increase (decrease if negative) of the amplitude of any following pulse, range [Vr-, Vr+], resolution 1mV

T_{hold} : time between consecutive pulses during which V_{hold} is applied, range [0, 2000000]ms, resolution 1ms

T_{pulse} : pulses duration, range [1, 2000000]ms, resolution 1ms

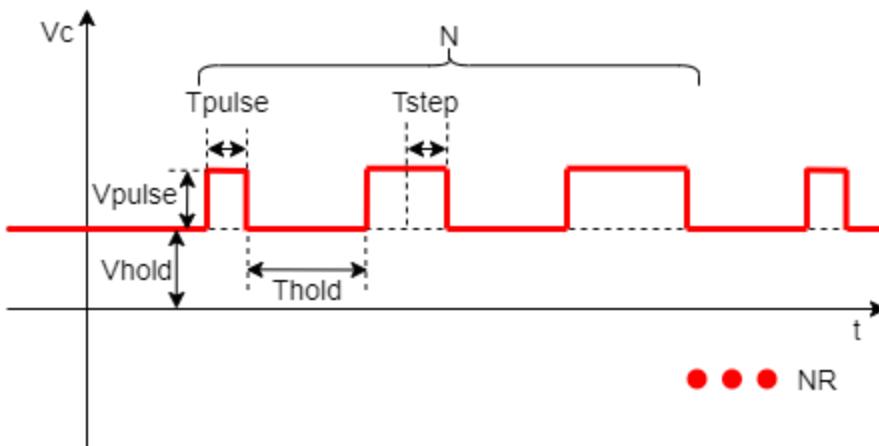

N : number of pulses in each series, range [1, 1000]

NR : number of repetitions of the whole series, range [0, 1000]. NOTE: set to 0 for infinite repetitions

5) Rectangular pulses with variable duration

Repeats a series of rectangular pulses of changing duration. The series can be repeated for a given number of times or indefinitely.

Parameters

V_{hold} : holding voltage, range [V_r- , V_r+], resolution 1mV

V_{pulse} : pulses voltage amplitude wrt V_{hold} , range [V_r- , V_r+], resolution 1mV

T_{hold} : time between consecutive pulses during which V_{hold} is applied, range [0, 2000000]ms, resolution 1ms

T_{pulse} : duration of the first pulse in the series, range [1, 2000000]ms, resolution 1ms

T_{step} : increase (decrease if negative) of the duration of any following pulse, range [-100000000, +100000000]ms, resolution 1ms

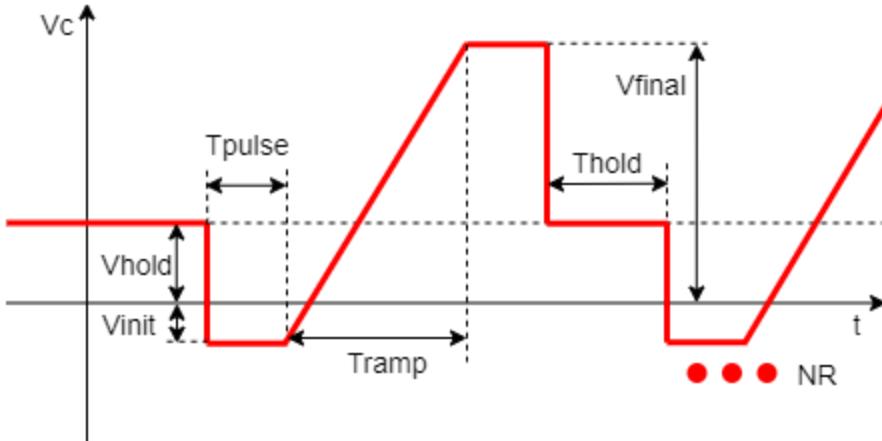

N : number of pulses in each series, range [1, 1000]

NR : number of repetitions of the whole series, range [0, 1000]. NOTE: set to 0 for infinite repetitions

6) Ramp

Repeats a ramp. The ramp can be repeated for a given number of times or indefinitely.

Parameters

V_{hold} : holding voltage, range [V_r- , V_r+], resolution 1mV

V_{final} : final absolute voltage of the ramp, range [V_r- , V_r+], resolution 1mV

V_{init} : initial absolute voltage of the ramp, range [V_r- , V_r+], resolution 1mV

$Thold$: time between ramp repetitions during which V_{hold} is applied, range [0, 2000000]ms, resolution 1ms

T_{pulse} : duration of the plateaus at V_{max} and V_{min} , range [1, 2000000]ms, resolution 1ms

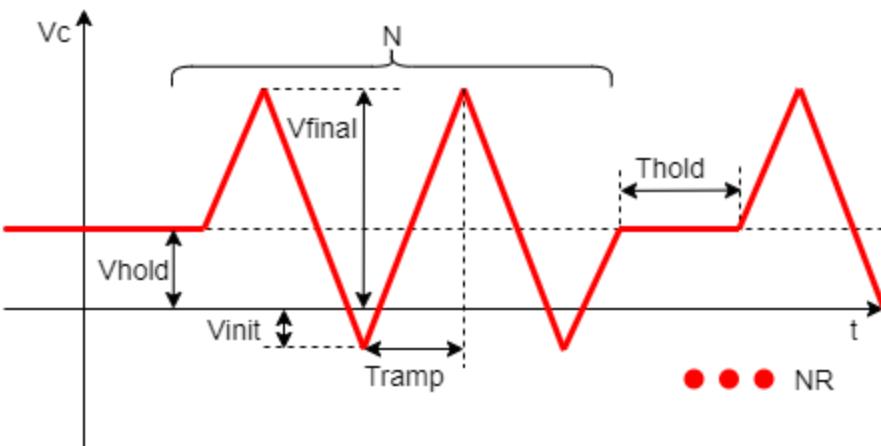

$Tramp$: time it takes to go from V_{init} to V_{final} , range [1, 30000000]ms, resolution 1ms

NR : number of ramp repetitions, range [0, 1000]. NOTE: set to 0 for infinite repetitions

7) Cyclic voltammetry

Repeats a series of pairs of positive and negative ramps. The series can be repeated for a given number of times or indefinitely.

Parameters

Vhold: holding voltage, range [Vr-, Vr+], resolution 1mV

Vfinal: final absolute voltage of the ramps, range [Vr-, Vr+], resolution 1mV

Vinit: initial absolute voltage of the ramps, range [Vr-, Vr+], resolution 1mV

Thold: time between consecutive series during which Vhold is applied, range [0, 2000000]ms, resolution 1ms

Tramp: time it takes to go from Vinit to Vfinal, range [1, 30000000]ms, resolution 1ms

N: number of pairs of ramps in each series, range [1, 1000]

NR: number of repetitions of the whole series, range [0, 1000]. NOTE: set to 0 for infinite repetitions

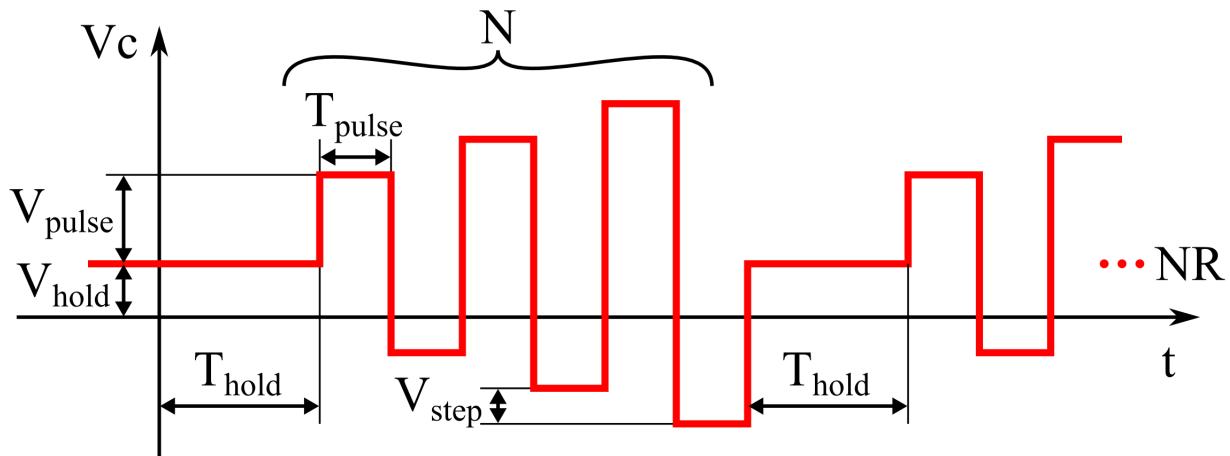

Part 2: Voltage protocols for eNPR v5 and lower

For protocols 0, 1, 2, 4, and 5 refer to Part 1 since they didn't change.

3) Conductance estimation

Repeats a series of pairs of positive and negative rectangular pulses of changing amplitude. The series can be repeated for a given number of times or indefinitely.

Parameters

V_{hold} : holding voltage, range [V_r- , V_r+], resolution 1mV

V_{pulse} : voltage amplitude of the first pair of pulses in the series wrt V_{hold} , range [V_r- , V_r+], resolution 1mV

V_{step} : increase (decrease if negative) of the amplitude of any following pair of pulses, range values [V_r- , V_r+], resolution 1mV

T_{hold} : time between series of pulses during which V_{hold} is applied, range [0, 2000000]ms, resolution 1ms

T_{pulse} : pulses duration, range [1, 2000000]ms, resolution 1ms

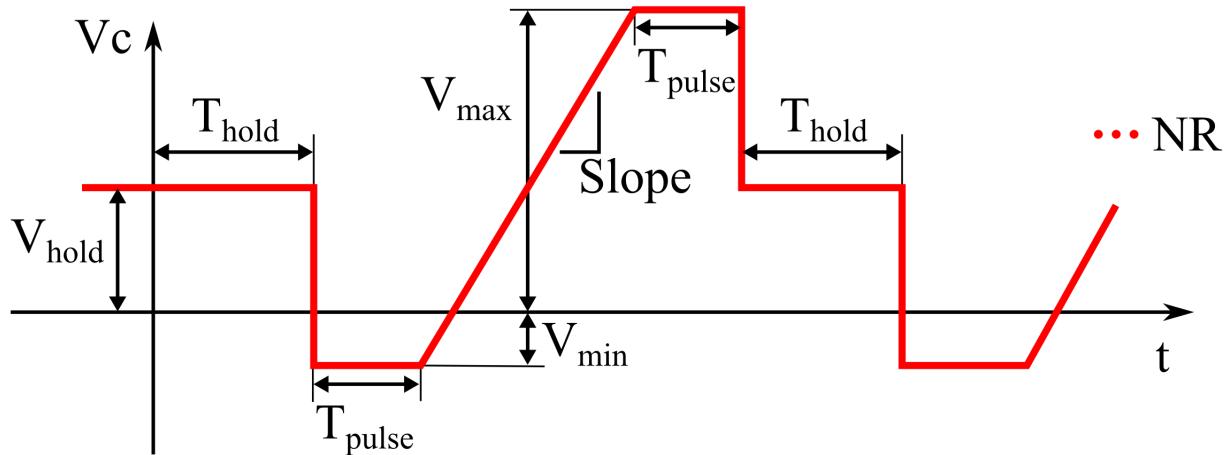

N : number of pairs of pulses in each series, range [1, 1000]

NR : number of repetitions of the whole series, range [0, 1000]. NOTE: set to 0 for infinite repetitions

6) Ramp

Repeats a ramp. The ramp can be repeated for a given number of times or indefinitely.

Parameters

V_{hold} : holding voltage, range [V_r- , V_r+], resolution 1mV

V_{max} : maximum absolute voltage of the ramp, range [V_r- , V_r+], resolution 1mV

V_{min} : minimum absolute voltage of the ramp, range [V_r- , V_r+], resolution 1mV

T_{hold} : time between ramp repetitions during which V_{hold} is applied, range [0, 2000000]ms, resolution 1ms

T_{pulse} : duration of the plateaus at V_{max} and V_{min} , range [1, 2000000]ms, resolution 1ms

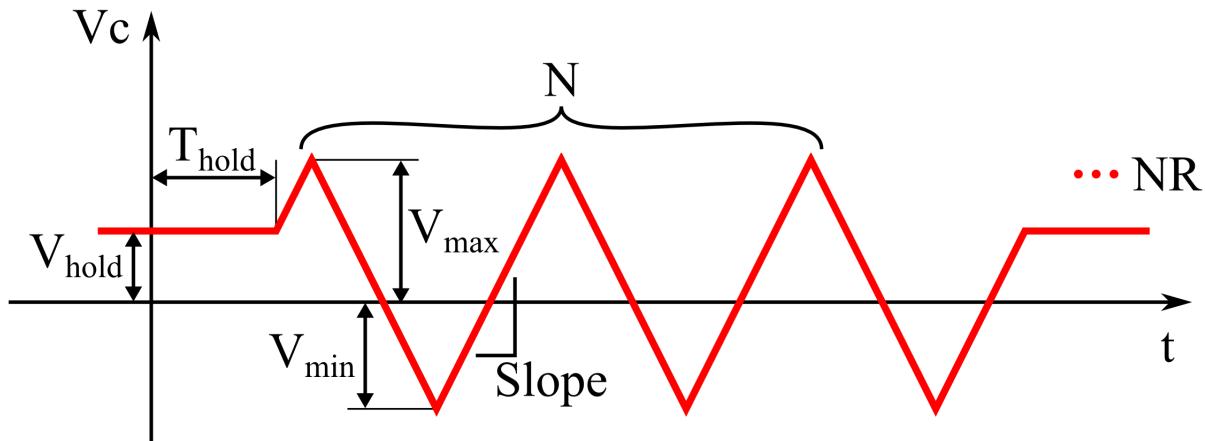

Slope: slope of the voltage during the ramps, range [1, 1000]mV/ms, resolution 1mV/ms. With the control Slope div it is possible to reduce the Slope range by a factor of 1000

NR: number of ramp repetitions, range [0, 1000]. NOTE: set to 0 for infinite repetitions

7) Cyclic voltammetry

Repeats a series of pairs of positive and negative ramps. The series can be repeated for a given number of times or indefinitely.

Parameters

V_{hold} : holding voltage, range [Vr-, Vr+], resolution 1mV

V_{max} : maximum absolute voltage of the ramp, range [Vr-, Vr+], resolution 1mV

V_{min} : minimum absolute voltage of the ramp, range [Vr-, Vr+], resolution 1mV

T_{hold} : time between consecutive series during which V_{hold} is applied, range [0, 2000000]ms, resolution 1ms

Slope: slope of the voltage during the ramps, range [1, 1000]mV/ms, resolution 1mV/ms. With the control Slope div it is possible to reduce the Slope range by a factor of 1000

N : number of pairs of ramps in each series, range [1, 1000]

NR : number of repetitions of the whole series, range [0, 1000]. NOTE: set to 0 for infinite repetitions
